

NOVA STEEL

ANGLED C PROFILE

C profile C profile, which is prepared for use in many sectors and offers superior design features, can be called a perforated profile type that can be ordered in different sizes. The reason why it is preferred as a perforated profile is due to the use of bolts without welding in production lines and high-tech projects.

C profiles, which we produce specially, can be used in burr-free cutting, desired dimensions and sections.

C profile is used in energy sector, construction sector, automotive industry, light steel structures and steel doors.

Section Names		Production Range
H	Height	*
X	Top Edge Width	*
Y	Bottom Edge Width	*
C	Thickness	*
Z	Lower/Upper Nail Height	*
a	Bottom Side Angle	*
b	Top Edge Angle	*
