

ANGLED U PROFILE

U profile products used in many fields, also known as U construction, steel structure, light steel structure, automotive, electrical-electronics, metal goods, energy, etc. It is preferred as a carrier or auxiliary element in industrial structures and steel buildings in the sectors. The developments in the spare and construction sector have actually increased the need for U profiles.

Because U profiles have very high carrying capacities; It provides a material and price advantage of up to 40% compared to structures produced with heavy steel materials. In addition, it has made steel building constructions more reliable, fast and economical as it provides ease of production, supply, shipment and assembly.

U profile products are used in construction, steel structure, light steel structure, automotive, electrical-electronics, metal goods, energy, etc. It is preferred as a carrier or auxiliary element in industrial structures and steel buildings in the sectors.

Section Names		Production Range
X	Left Edge Height	*
Y	Bottom Edge Width	*
Z	Right Side Height	*
C	Thickness	*
a	Left Side Angle	*
b	Right Side Angle	*
